

Praveen Kumar *DevOps Team Leader*

praveensinghrahav96@gmail.com | +917009426406 | Gurugram, India

linkedin.com/in/praveenrahav01/ | github.com/praveenrahav96/

Summary

DevOps Team Leader with 9 years of experience in automating infrastructure, managing CI/CD pipelines, and driving cloud-native adoption on AWS. Skilled in Kubernetes, Docker, Terraform, and observability stacks (Grafana, Loki, Tempo, Mimir). Proven track record of reducing costs, optimizing deployments, and improving system resilience in high-scale environments.

Skills

Cloud Platforms: AWS (EC2, S3, RDS, IAM, Lambda, CloudFormation, Control Tower)

Containers & Orchestration:: Docker, Kubernetes, Amazon EKS, Helm

CI/CD & Automation: GoCD, Jenkins, GitHub Actions, Terraform, Ansible, Chef, Packer

Monitoring & Logging: Grafana, Loki, Tempo, Mimir, Prometheus, ELK Stack, Datadog

Scripting & Programming: Python, Bash

Security & Networking: AWS Security Best Practices, VPC, Load Balancers, WAF, Networking Automation

Professional Experience

Payoneer, DevOps Team Leader

Feb 2026 – Present | Gurugram

- Built and scaled a high-performing DevOps team of 5 engineers from the ground up, driving technical excellence, collaboration and operational efficiency.
- Led and mentored a team of 5 DevOps engineers, overseeing project execution, task prioritization, and professional development.
- Managed and optimized hybrid infrastructure spanning AWS, Microsoft Azure, and on-premises environments, ensuring high availability, security, and reliability.
- Designed and implemented Infrastructure as Code (IaC) solutions to automate infrastructure provisioning and lifecycle management across hybrid cloud environments using tools such as Terraform and Ansible.

Aspire, Lead DevOps Engineer

Jul 2023 – Jan 2026 | Gurugram

- Led a team of 5 DevOps engineers, driving quarterly goal-setting, daily scrum meetings, and providing structured monthly feedback.
- Led the complete migration of logging and tracing infrastructure from Datadog to a self-hosted Grafana OSS (Loki, Tempo, Mimir) on Kubernetes, resulting in significant cost savings (~40%) and improved stack flexibility.
- Deployed and managed AI-driven applications in production, including hosting Onyx and setting up n8n for production workflows.
- Implemented and operated monitoring/observability stack by hosting MCP servers for Grafana, ensuring reliability and performance of AI workloads.
- Orchestrated the migration of PHP and Golang services from AWS ECS to Amazon EKS, enhancing deployment flexibility, scalability, and Kubernetes-native ecosystem adoption.
- Designed and implemented CI/CD pipelines in GoCD, migrating from GitHub Actions to support a “build once, deploy multiple times” model across multiple environments (staging, qa, demo, prod).

- Devised and implemented canary deployment strategies using Kubernetes, with percentage based promotion real-time health metrics.
- Achieved over 40% reduction in container build time through build layer caching, parallelized builds, and optimization of base images.
- Drove cloud cost optimization by rightsizing resources, tuning autoscaling policies, and eliminating underutilized compute workloads.

SIMPL Inc, Staff DevOps Engineer

Nov 2020 – Jun 2023 | Remote

- Managed a team of 5 DevOps engineers and worked on setting up quarterly goals.
- Automated the creation and configuration of multiple environments ensuring consistency and reproducibility for all environments.
- Setup the monitoring, logging, tracing and alerting for resources on AWS.
- Secured infrastructure by monitoring and remediating any security threats.
- Designed and implemented serverless architecture using multiple services resulting in improved performance and cost saving.
- Collaborated with Engineering team to optimize deployment and scaling of application.
- Participated in call rotations for any incident management on L1 and L2 level.
- Managed automated secure network architecture while keeping performance tuning in mind.

Flux7, an NTT DATA Company, DevOps Engineer

Jul 2019 – Oct 2020 | Remote

- Build and manage IAC for hardening AWS Accounts using Control Tower, System manager, CloudTrail, Config, Trust Advisor and Lambda.
- Accountable for working closely with clients to understand, review and implement architecture as per the requirements.
- Build CI/CD pipeline to automate various deploy process in AWS Environment

Coral Blockchain, DevOps Engineer

Jan 2019 – Jun 2019 | Remote

- Manage, design, analyze and implement Enterprise Blockchain Solutions in domains like Healthcare, Water Supply Management, Government Processes Management.
- Build and Deploy Enterprise Blockchain application on AWS.
- Mentoring new interns and helping them navigate through problems to account for the deliverables on a daily basis

DataGrokr Analytics Private Limited, DevOps Engineer

Oct 2017 – Dec 2018 | Bengaluru

- Accountable for working closely with clients to understand, review and implement architecture as per the requirements.
- Actively manage, improve, and monitor cloud infrastructure on AWS, EC2, S3, and RDS, including backups, patches, and scaling.
- Handled tasks independently and collaboratively within a team; mentored new interns by guiding them through challenges to ensure daily deliverables were met.

Certificates

AWS Certified DevOps - Professional — Mar 2020 - Mar 2023

AWS Certified Developer - Associate — Dec 2019 - Dec 2022

AWS Certified SysOps Administrator - Associate — Oct 2019 - Oct 2022

AWS Certified Solutions Architect - Associate — Mar 2018 - Dec 2021

Education

Lovely Professional University

Aug 2014 – Jul 2018

Bachelor of Technology in Computer Science and Engineering
